Application/Control Number: 10/668,216

Art Unit: 1755

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in

section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are

such that the subject matter as a whole would have been obvious at the time the invention was made to a person

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the

manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 1 020 501.

The EP reference teaches in sections [0047]-[0057], a polishing slurry for a substrate

comprising a combination of inorganic particles (silica, etc.) and polymer particles. The polymer

particles and inorganic particles have a size of at least 0.01 um and the inorganic particles are

smaller than the polymer particles. The ratio of the mean particle size of the polymer particles to

the mean particle size of the inorganic particles is 0.01-0.95. The content of both particles is also

defined.

The reference teaches a polishing slurry (bi-modal) which reads on the instant claims in

view of the teaching of the individual particle sizes and the ratio of the mean particle size of the

polymer particles to the mean particle size of the inorganic particles. In view of this, the claimed

formula and therefore subject matter of claims 1, 2, 4, and 7-8 would have been obvious to one

having ordinary skill in the art at the time the invention was made to have selected the

overlapping portion of the range disclosed by the reference because overlapping ranges have

been held to be a prima facie case of obviousness, see In re Malagari, 182 U.S.P.Q. 549; In re

Wertheim 191 USPQ 90 (CCPA 1976)". With respect to the limitation of claim 3, it is the

examiners position that the polymers defined by this reference will have the claimed glass

Application/Control Number: 10/668,216

Art Unit: 1755

transition temperature absent evidence to the contrary. With respect to the limitations of claim 5, as can be seen, the inorganic particles are colloidal in size thus reading on colloidal silica. In addition, it is the examiners position that the recitation of "silica" in general encompasses colloidal silica because "a generic disclosure renders a claimed species prima facie obvious. Ex parte George 21 USPQ 2d 1057, 1060 (BPAI 1991); In re Woodruff 16 USPQ 2d 1934; Merk & Co. v. Biocraft Lab. Inc. 10 USPQ 2d 1843 (Fed. Cir. 1983); In re Susi 169 USPQ 423 (CCPA 1971). With respect to the limitation of claim 6, the reference defines amounts for the inorganic and organic particles and although a ratio is not specifically defined, the claimed ratio is broadly encompassed by the reference defining a mixture. Finally, in the above rejection, the desired particle size is a function of the application and mere recitation of that size does not represent a patentable distinction to one of ordinary skill in the art, lacking evidence to the contrary.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 1 036 836.

The EP reference teaches in sections [0038]-[0065], a polishing slurry for a substrate comprising a combination of inorganic particles (silica, etc.) and polymer particles. The polymer particles and inorganic particles have a size of 0.01 to 1 micron. The ratio of the mean particle size of the polymer particles to the mean particle size of the inorganic particles is also defined (can be 1). The content of both particles is also defined as a ratio.

The reference teaches a polishing slurry (bi-modal) which reads on the instant claims in view of the teaching of the individual particle sizes and the ratio of the mean particle size of the polymer particles to the mean particle size of the inorganic particles. In view of this, the claimed

Application/Control Number: 10/668,216

Art Unit: 1755

formula and therefore subject matter of claims 1, 2, 4, and 6-8 would have been obvious to one having ordinary skill in the art at the time the invention was made to have selected the overlapping portion of the range disclosed by the reference because overlapping ranges have been held to be a prima facie case of obviousness, see *In re Malagari*, 182 U.S.P.Q. 549; *In re Wertheim* 191 USPQ 90 (CCPA 1976)". With respect to the limitation of claim 3, it is the examiners position that the polymers defined by this reference will have the claimed glass transition temperature absent evidence to the contrary. With respect to the limitations of claim 5, as can be seen, the inorganic particles are colloidal in size thus reading on colloidal silica. In addition, it is the examiners position that the recitation of "silica" in general encompasses colloidal silica because "a generic disclosure renders a claimed species prima facie obvious. *Ex parte George* 21 USPQ 2d 1057, 1060 (BPAI 1991); *In re Woodruff* 16 USPQ 2d 1934; *Merk & Co. v. Biocraft Lab. Inc.* 10 USPQ 2d 1843 (Fed. Cir. 1983); *In re Susi* 169 USPQ 423 (CCPA 1971).

In view of the teachings as set forth above, it is the examiners position that the references reasonably teach or suggest the limitations of the rejected claims.

"A reference is good not only for what it teaches but also for what one of ordinary skill might reasonably infer from the teachings. *In re Opprecht* 12 USPQ 2d 1235, 1236 (CAFC 1989); *In re Bode* USPQ 12; *In re Lamberti* 192 USPQ 278; *In re Bozek* 163 USPQ 545, 549 (CCPA 1969); *In re Van Mater* 144 USPQ 421; *In re Jacoby* 135 USPQ 317; *In re LeGrice* 133 USPQ 365; *In re Preda* 159 USPQ 342 (CCPA 1968)". In addition, "A reference can be used for all it realistically teaches and is not limited to the disclosure in its preferred embodiments" See *In re Van Marter*, 144 USPQ 421.

Application/Control Number: 10/668,216 Page 5

Art Unit: 1755

The subject matter as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to have selected the overlapping portion of the range disclosed by the reference because overlapping ranges have been held to be a prima facie case of obviousness, see *In re Malagari*, 182 U.S.P.Q. 549; *In re Wertheim* 191 USPQ 90 (CCPA 1976)".

Applicants use process limitations to define the product and "product-by-process" claims do not patentably distinguish the product even though made by a different process. *In re Thorpe* 227 USPQ 964.

Evidence of unexpected results must be clear and convincing. *In re Lohr* 137 USPQ 548. Evidence of unexpected results must be commensurate in scope with the subject matter claimed. *In re Linder* 173 USPQ 356. The examiner acknowledges the statements made by applicants in the background section (statements referring to the prior art applied), but these statements alone are not sufficient to show patentability.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael A Marcheschi whose telephone number is (571) 272-1374. The examiner can normally be reached on M-F (8:00-5:30) First Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark L Bell can be reached on (571) 272-1362. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
